

## **ART385 Design Document for Interaction Design**

The ART385 Design Document emerges from a few different sources, including traditional [software design documents](#) and interface design workflows. The idea is to convey a design and code structures that run along with it.

### **Document Info**

Natalie, ART385, Code Timers, 28 April 2020

### **Re-state the Assignment**

This assignment implements two timers in order to manipulate a Processing sketch using an input from a potentiometer and a keyboard interaction.

### **Reflections**

I did not enjoy this assignment at all. I think I am not as well versed in timers as I had originally thought. In addition, my potentiometer barely works, which made testing it very hard. You'll see in the video that I attempted to show you in the serial monitor how only 1/10 times the potentiometer would register a change.
